

TAILS INSTALLATION AND CONFIGURATION IN VIRTUAL BOX

[Document subtitle]

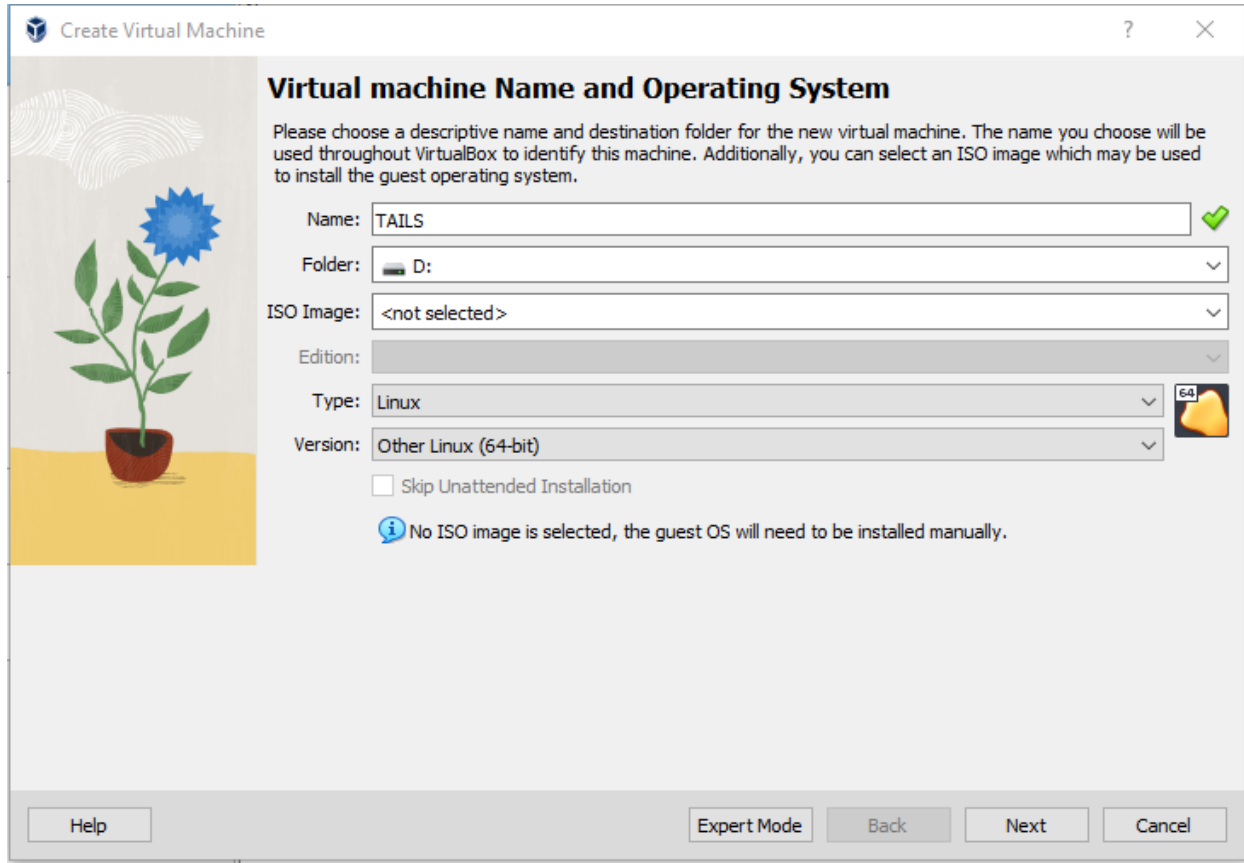

[DATE]

[COMPANY NAME]

[Company address]

- Make sure you have virtual box installed, select new from the virtual box window and when the below window displays, provide the name of preference, folder path type as *Linux* and version as shown below.

Create Virtual Machine

Virtual machine Name and Operating System

Please choose a descriptive name and destination folder for the new virtual machine. The name you choose will be used throughout VirtualBox to identify this machine. Additionally, you can select an ISO image which may be used to install the guest operating system.

Name: TAILS ✓

Folder: D: ▾

ISO Image: <not selected> ▾

Edition: ▾

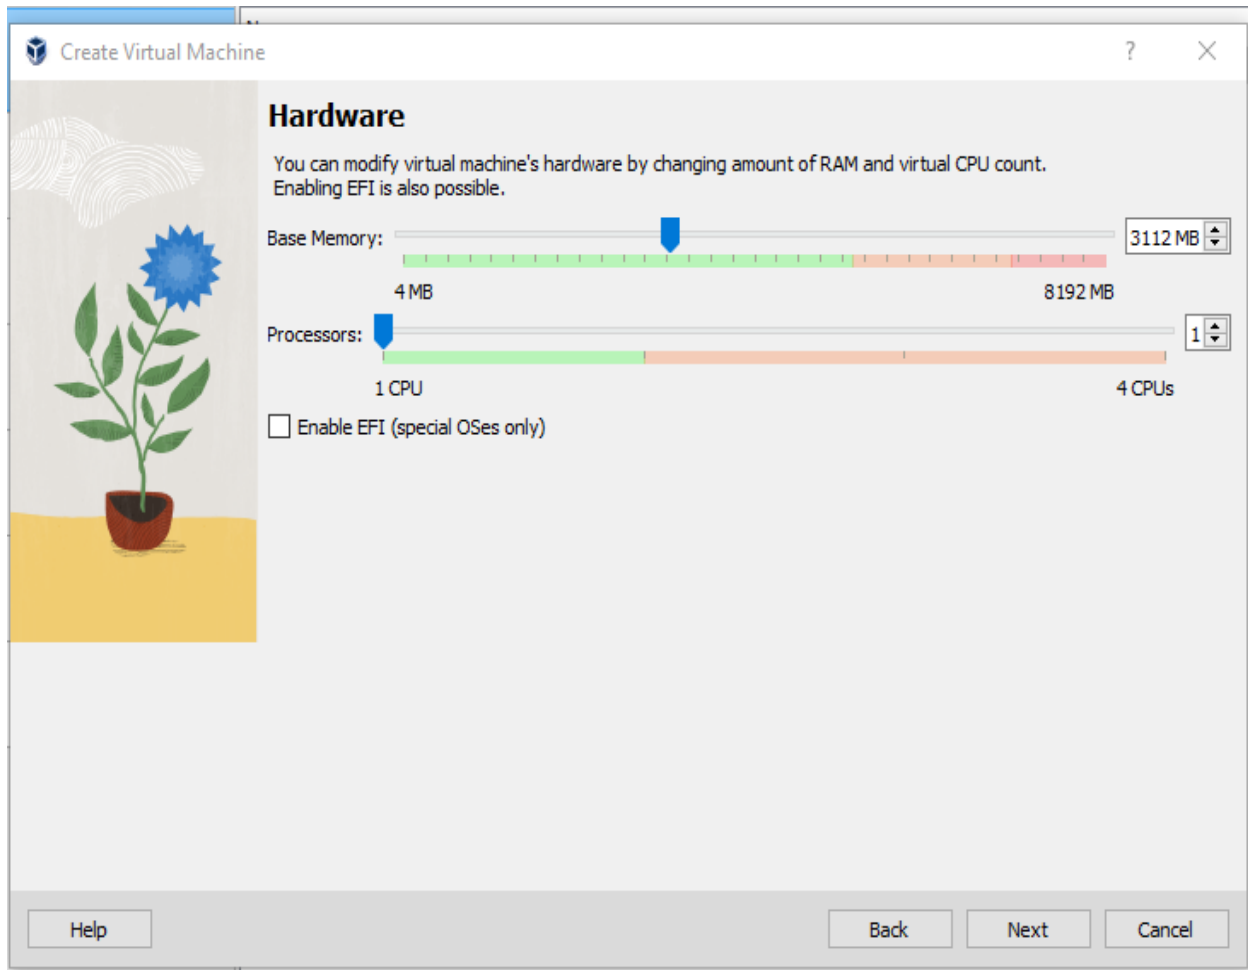

Type: Linux ▾ 64

Version: Other Linux (64-bit) ▾

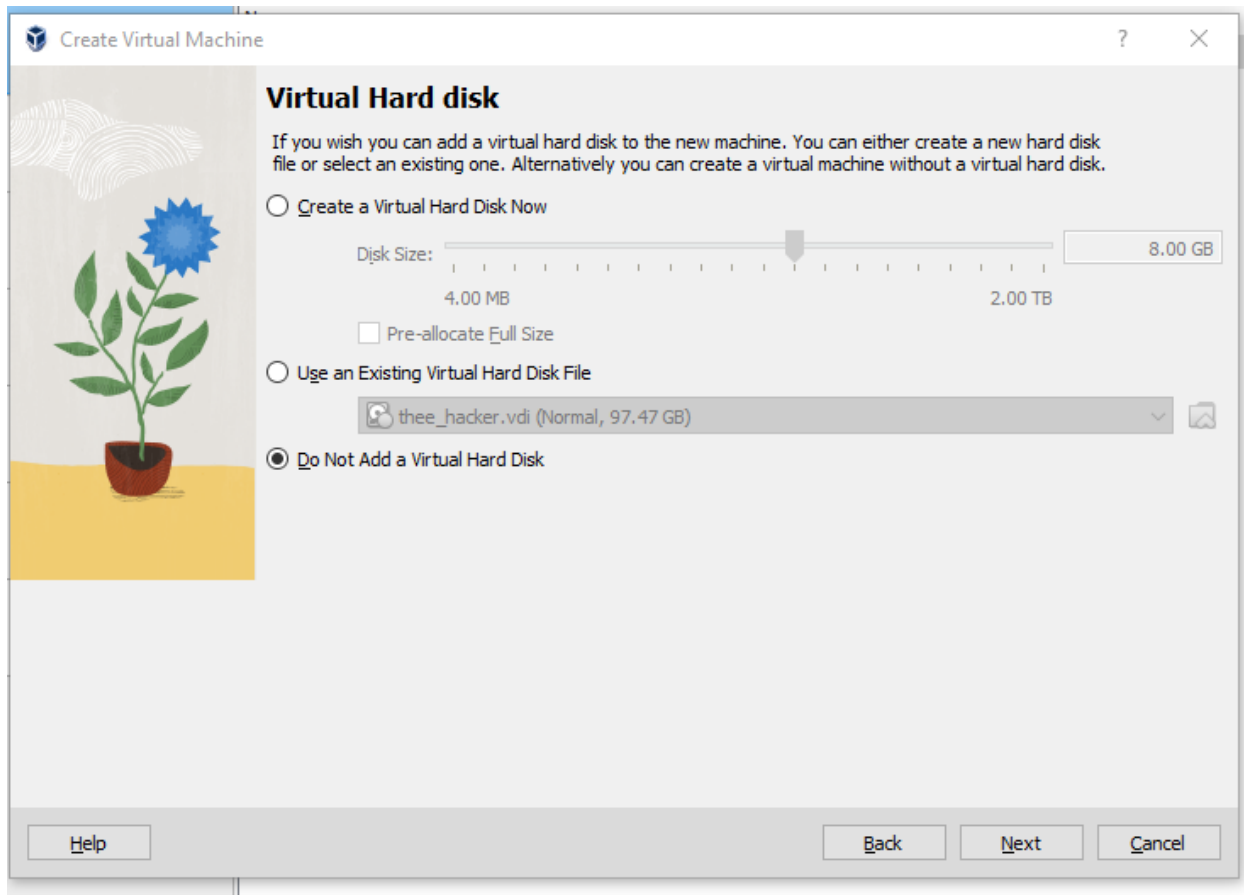

☐ Skip Unattended Installation

 No ISO image is selected, the guest OS will need to be installed manually.

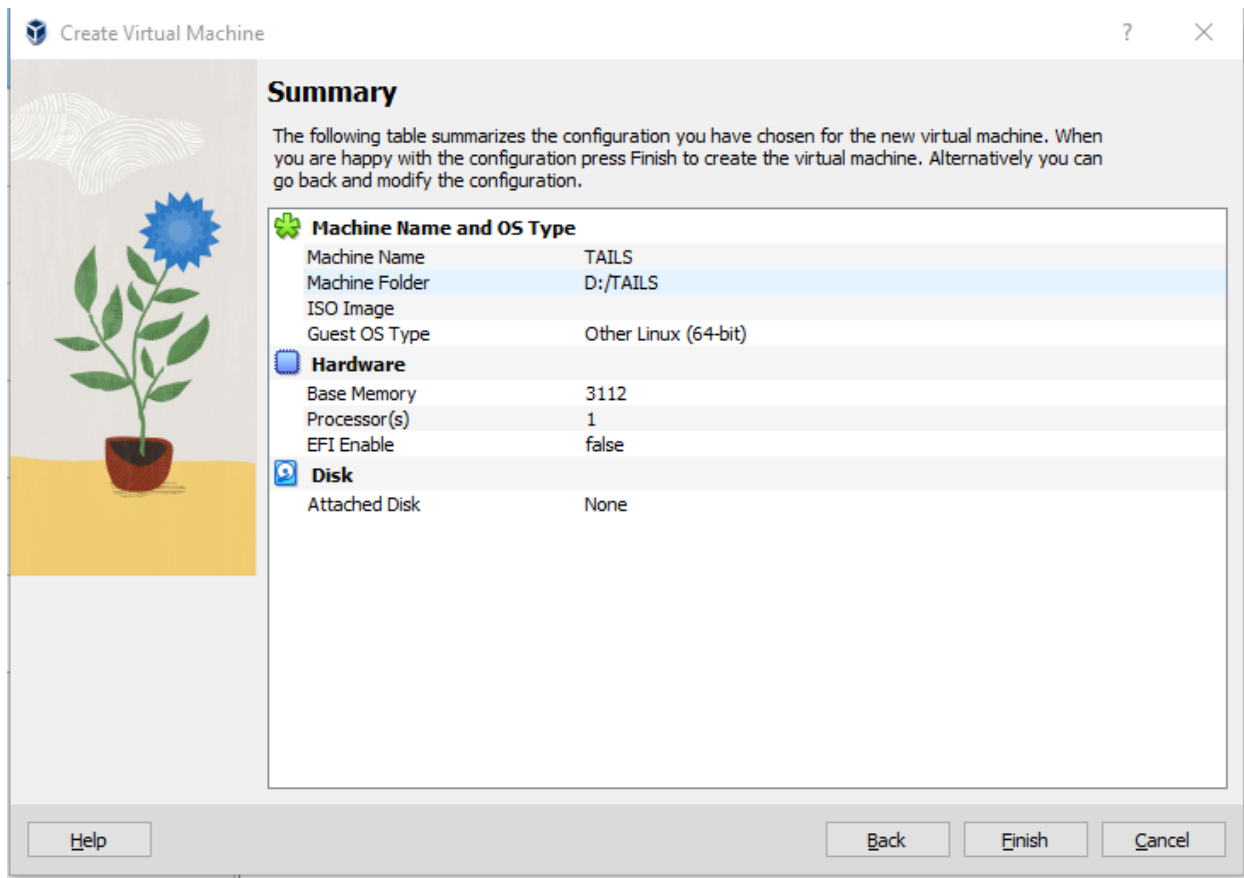

Help Expert Mode Back Next Cancel

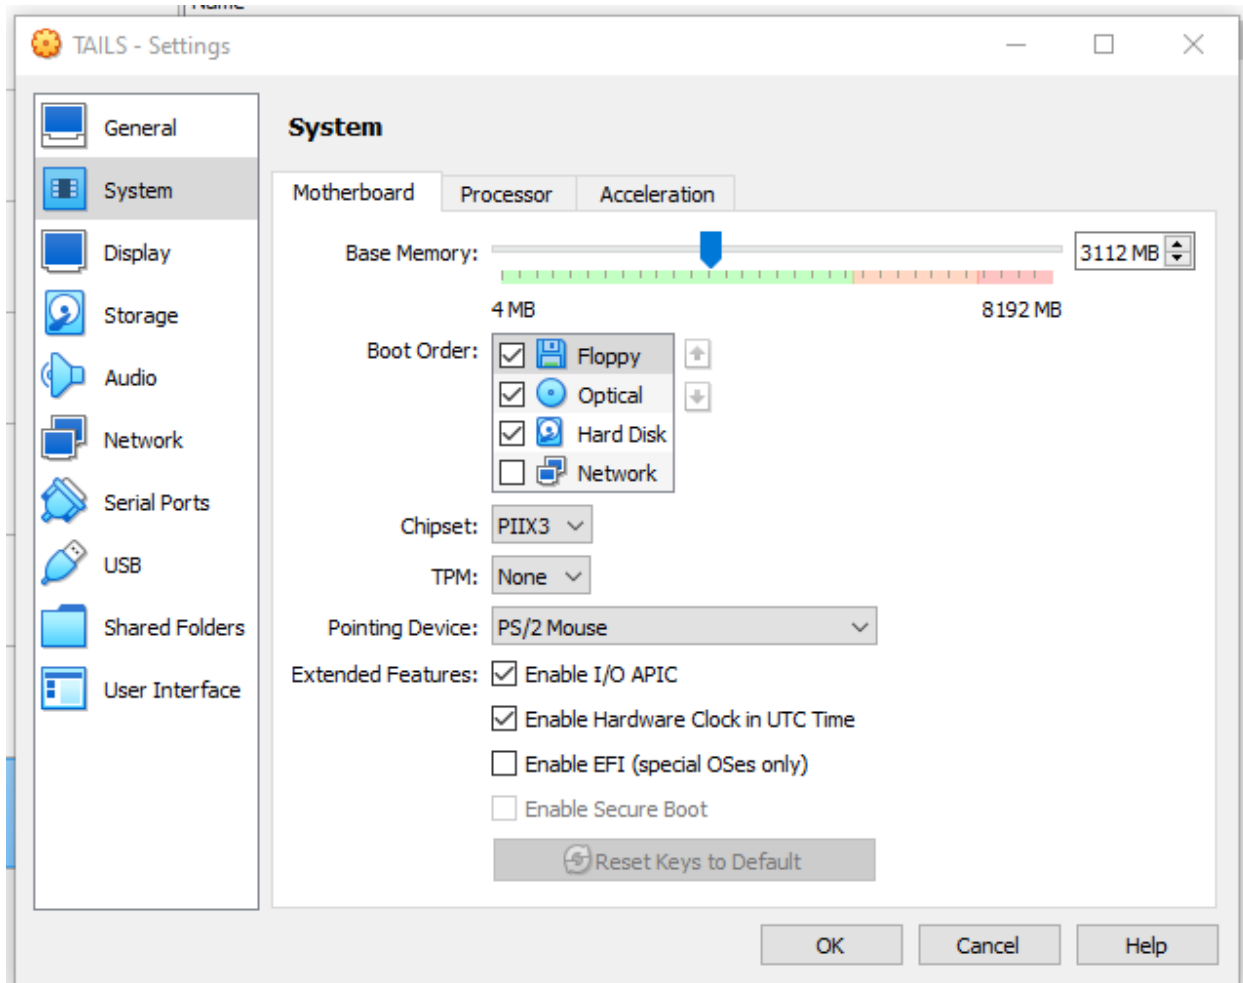

- In this section specify the hardware requirements of choice, with base memory allocated atleast 2GB and processors .you can as well go with the defaults.

- In this window, choose the option for “*Do Not Add a Virtual Hard Disk*”. Since tails is non persistent when it runs in virtual box so there is no need for creating a virtual hard disk. We will attach the iso image and load it every time we start the machine.

- A summary of your installation is arranged as above via the summary window. When you encounter the warning dialogue box above click continue.

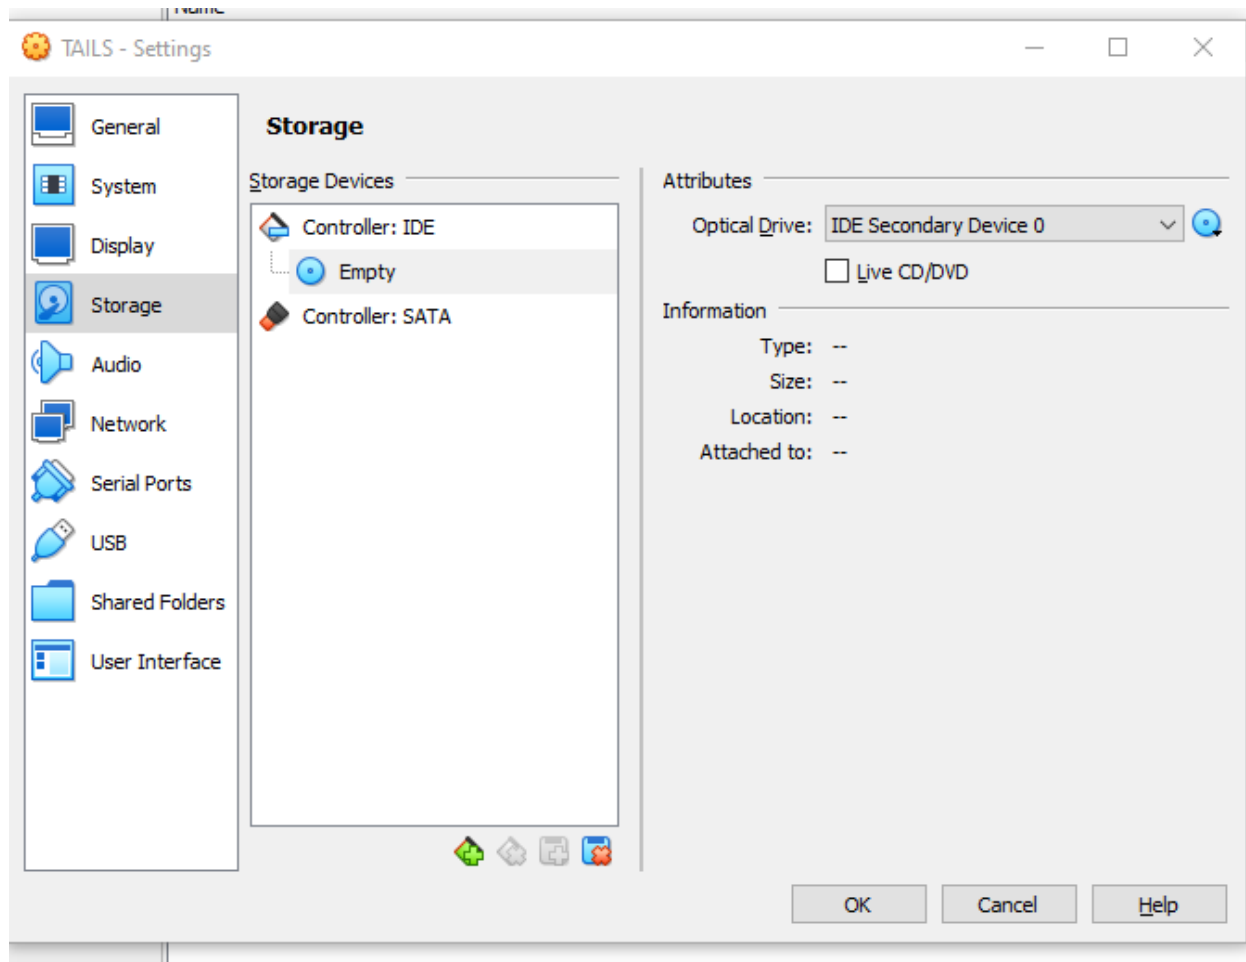

- Select the tails from the virtual box console and navigate to the system and under the motherboard, ensure that the “*Enable I/O APIC*” check box is checked.

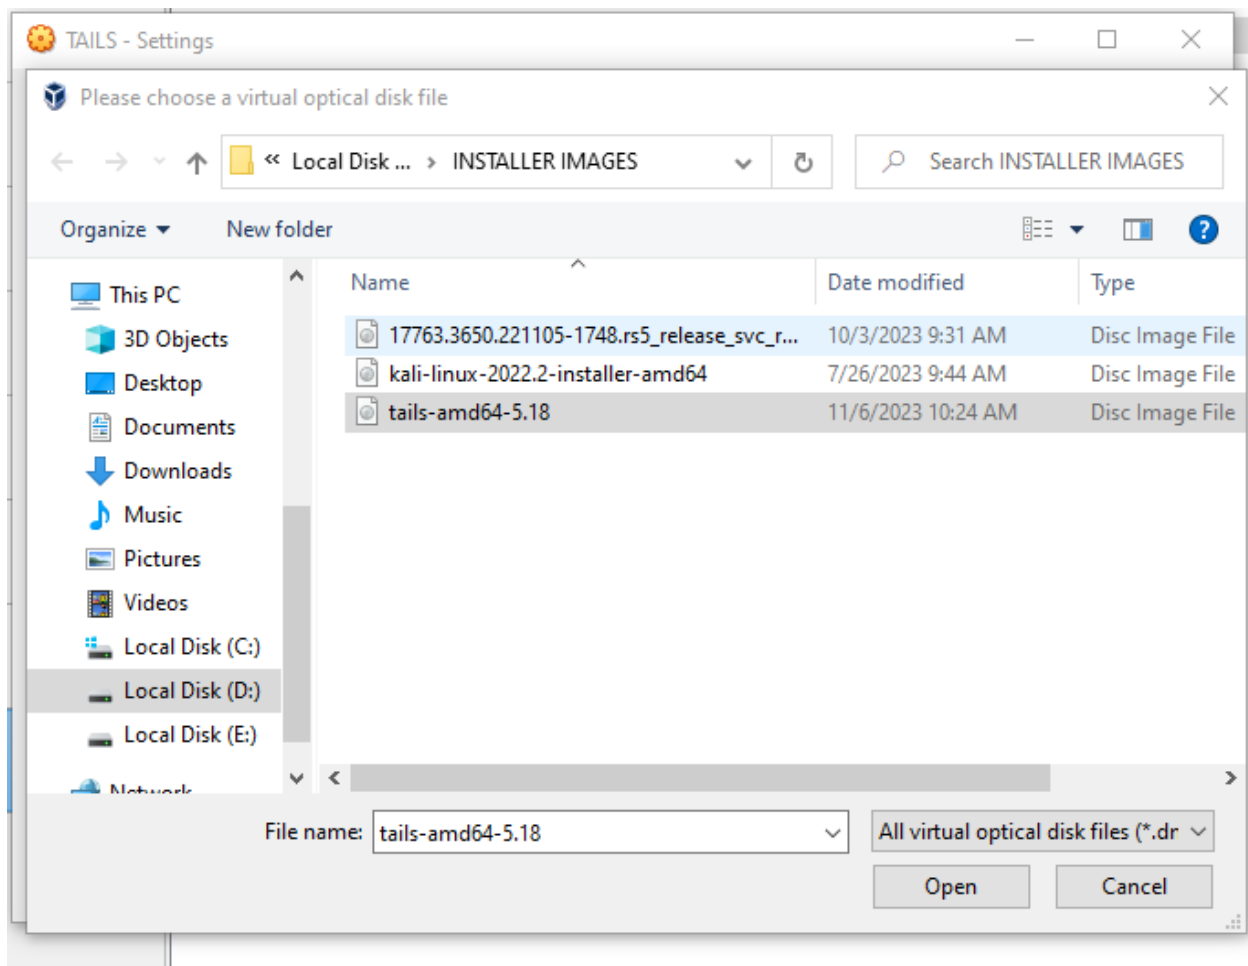

Make sure the check box for “Enable I/O APIC” is checked

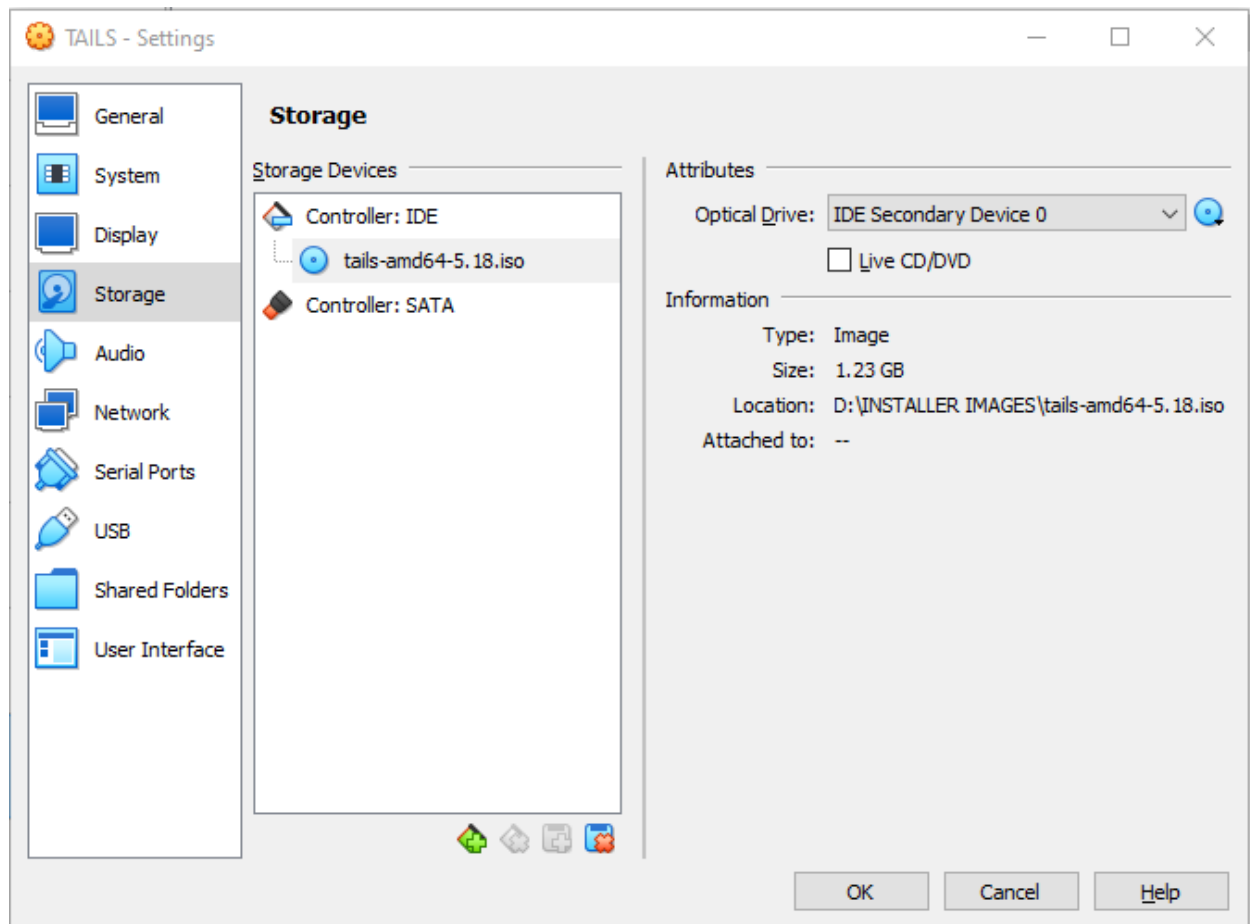

- Access the storage to get a view of the window as above.

- **Select “Empty ” from the dialog box as shown above and navigate to the button on the top right corner in the attributes section near the Optical Drive and click on the drop down arrow and select “choose a disk file”.**

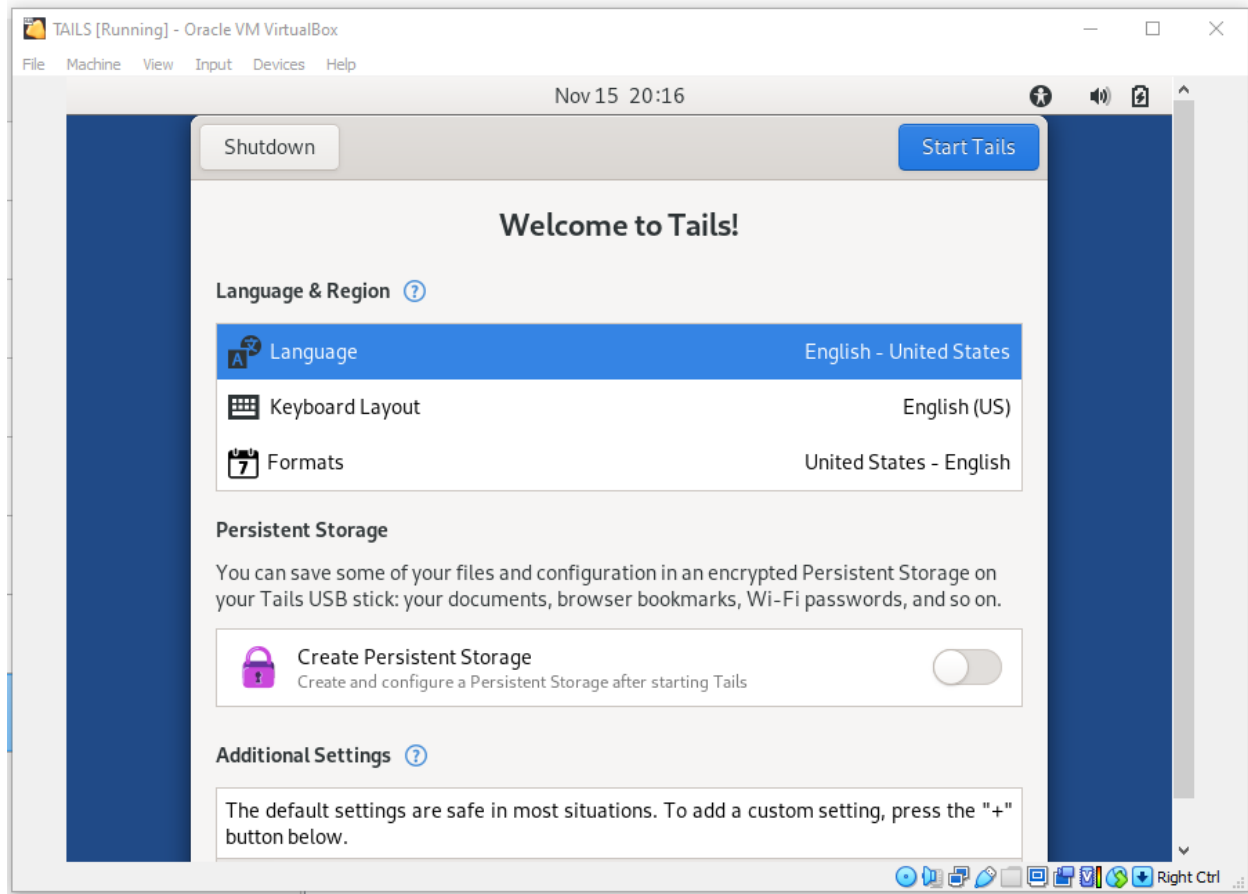

- **Navigate to the location where you stored the tails iso image, select it and click on open.**

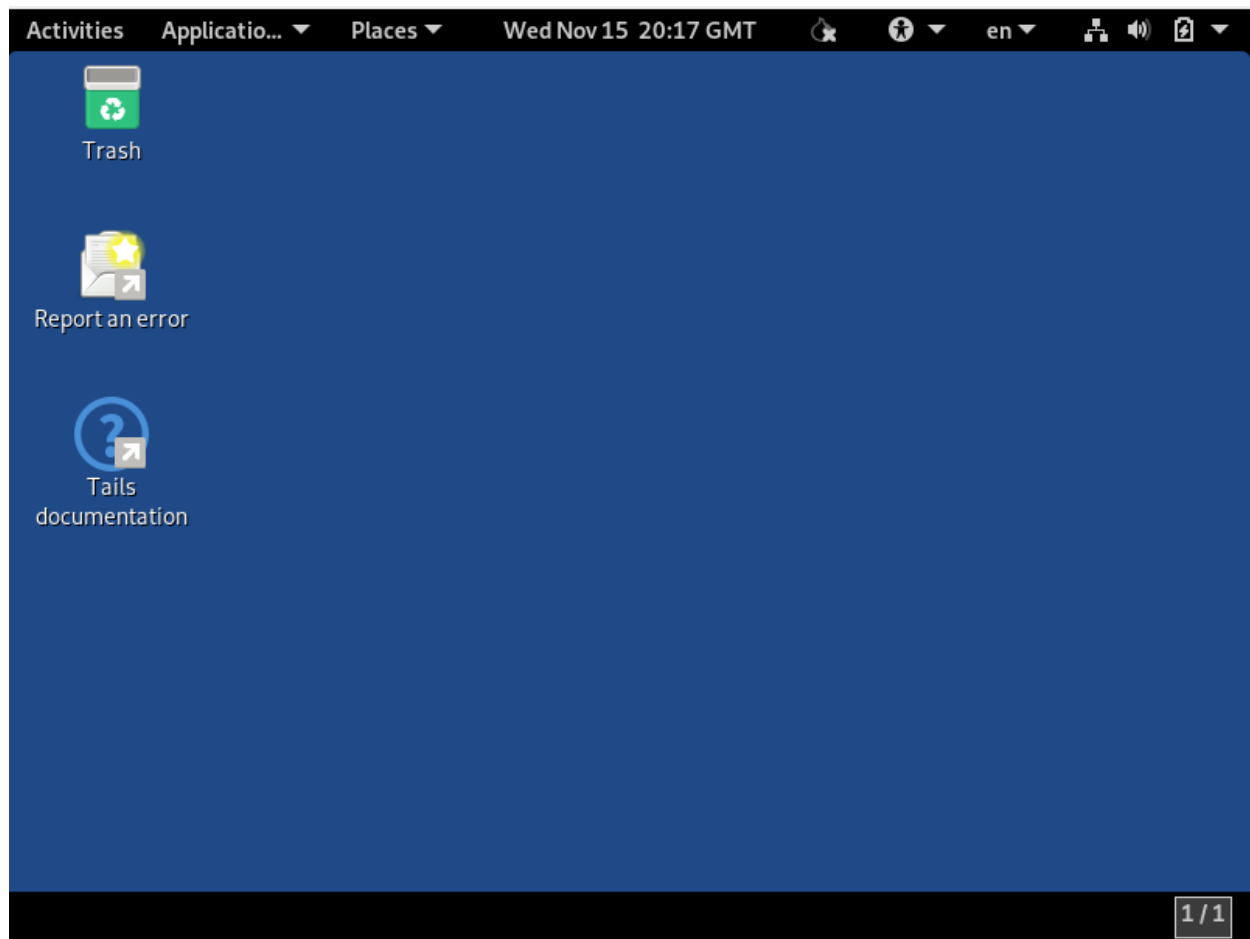

- the “Empty” in the storage devices is no longer visible since we just attached the iso image.
- Make sure you don’t change the location of the tails iso image from now on.

- **let tails load.**

- you will be welcome with the above screen, select “*start Tails*”.

- the above window indicates successful installation of Tails in virtual box.

- you can now get an interaction with the features of the Tails OS.
